

RADIAL PATTERNS (CENTER-BASED DESIGNS)

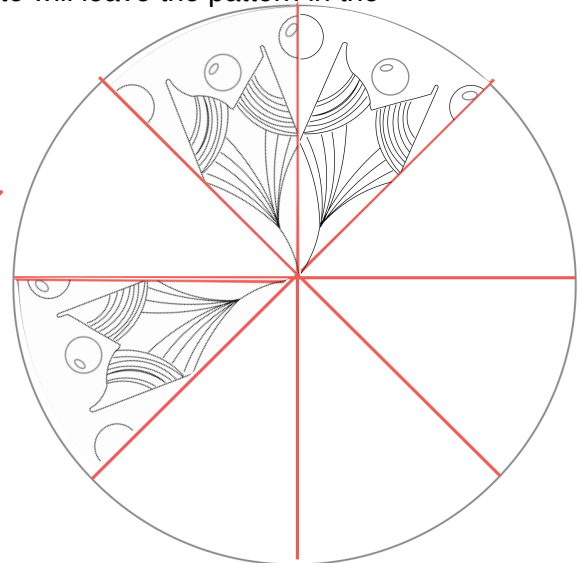

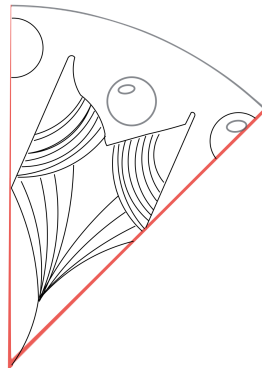

These designs can fit in a circle or a square. Additional details can be added to a symmetrical design to make it more interesting.

1. Start by drawing 4 lines through the circle to create 8 sections.

2. Cut out the pie shaped section and draw an interesting pattern on it. Next using a graphite pencil, shade the back of the pie piece. Next trace over it and the graphite will leave the pattern in the 8 sections.

3. Shade in the patterns using graphite and different colors.
